

# One Company. One Focus. Great Results.

## That's What You Get From

## GreyStone

**CAD DRAWING OF A TYPICAL PLANT LAYOUT  
USING QUALITY GREYSTONE EQUIPMENT**

In addition to its standard product line, GreyStone offers customized engineering and manufacturing services to customers with special problems and needs. If you have a unique project, we can build it. This "custom" approach to manufacturing aggregate processing equipment sets GreyStone apart from its competitors.

The company's sales engineers are trained to offer pre-project engineering services and to assist customers up front in creating an integrated pit or mine layout designed to produce maximum output.

Once the layout is determined, one of GreyStone's design engineers can plot the configuration on a CAD program for customer approval.

At GreyStone, customers get one company with a single focus in sand production. That's why our results will be superior to other manufacturers.

*For more information on GreyStone equipment or an estimate on custom-designed aggregate sand processing systems, please contact us:*
